ABOUT THE PROGRAMME

The Joint Programme for Data and Statistics (JPDS) in Uganda is a strategic instrument aimed at creating catalytic change in the quality, relevance and use of SDG data and statistics in Uganda consistent with international human rights and gender equality norms and principles. Aligned to Uganda's third National Development Plan (NDP III) 2020/2021 - 2024/2025, the United Nations

Sustainable Development Cooperation Framework (UNSDCF) 2021-20251 and the Third Plan for National Statistical Development (PNSD III) 2020/21-2024/25, the programme is a consolidated offer of 12 UN agencies to the Government and the people of Uganda towards improving the capacity of the National Statistical System.

THEORY OF CHANGE

It is envisaged that supporting enhanced statistical coordination and partnerships, as well as mechanisms for quality SDGs data and statistics production, reporting, access, and use is a prerequisite for transformative and inclusive

governance and an enabler for promoting shared prosperity in a healthy environment, and building human well-being and resilience across all levels of society. The joint programme will contribute to this through the following outcomes:

Outcome 1:

A strengthened policy, legal and financial environment enabling production, analysis and use of SDG data and statistics in Uganda.

Outcome 2:

Comprehensive, quality, human rights, gender sensitive and globally comparable data systematically produced for SDG reporting and monitoring.

Outcome 3:

Improved access to and use of SDG related data and statistics for inclusive decision-making
